Implant treatment options

Single tooth implant

One implant with one crown to replace a missing tooth.

Implant-supported bridge

Replacement for multiple missing teeth without a removable denture.

Full-arch fixed teeth (All-on-4 / full-arch)

A full set of fixed teeth supported by strategically planned implants in selected cases.

Full mouth rehabilitation

A combined treatment plan that may include implants, crowns, bridges, gum care and other restorative work depending on the overall condition.

Immediate loading may be possible in selected cases after clinical evaluation.

DENTAL CARE & IMPLANT CENTRE

Who may be suitable?

1. Consultation

2. Clinical examination

3. Dental X-rays

4. CBCT if clinically indicated

5. Treatment plan

- Good gum health and oral hygiene support better long-term maintenance
- Bone quantity and quality are assessed; grafting may sometimes be discussed

- Smoking, diabetes and general health can affect planning and healing
- When needed, CBCT may be arranged through a partner imaging centre

Suitability is individual — the website cannot decide this for you.

Healing, risks and long-term care

Common short-term effects

Mild soreness

(usually for a few days)

Swelling

(commonly peaks in 2–3 days)

Bruising

(may occur and fades in about 1–2 weeks)

Minor bleeding

Minor oozing may occur shortly after surgery. Persistent or heavy bleeding should be reported to your dentist.

Possible risks

- *Implant may not integrate* with bone.
- Gum inflammation or infection can occur.
- Restorations or parts can loosen or wear over time.
- Bone *grafting* adds complexity when required.

Long-term care

- Careful daily cleaning
- Regular dental reviews
- Avoid smoking
- Seek help if something feels loose or unusual

No guide can promise the same outcome for every patient.

Common questions

Is implant treatment painful?

Treatment is planned carefully; local anaesthesia is used; short-term soreness can happen after surgery.

How long does treatment take?

Timing varies; healing and restoration stages differ from case to case.

Do I always need CBCT?

Not always; it is arranged only when clinically indicated, through a partner imaging centre.

Can implants help in full-mouth replacement?

Yes, full-arch and full mouth rehabilitation options may be planned in suitable cases.

Is EMI available?

Yes, EMI options may be discussed for eligible treatment plans.

What should I ask at my consultation?

Ask about options, stages, healing time, maintenance, and costs.
